Week 7 Research Assignment

1. Three HTML elements that were not mentioned in any of the videos this week are `<article>`, `<nav>` and `<abbr>`. `<article>` is used as a section for the webpage. It should be used to section out something that is intended to be distributed or reused by something else. Things like a magazine or newspaper article, or a blog post are good examples of when to use `<article>`.

The `<nav>` element is another section-based element. It is used to represent a section of the page whose purpose is to provide navigation links. This could be used for menus with links to other pages or table of contents with links within the page.

The `<abbr>` element is used on inline text and represents an abbreviation or acronym. It isn't required to be used, but it is helpful if you want to provide more information outside of the documents content.

2. I decided to look at [espn.com](https://www.espn.com/) (<https://www.espn.com/>) to see what elements they use.
 1. `<meta>`
 2. `<link>`
 3. `<script>`
 4. `<nav>`
 5. ``
3. I was already familiar with HTML so in a lot of ways, this week was more of a review for me. I did enjoy working though the lab in Visual Studio Code as I haven't used that for HTML before. It was nice how quickly it allowed me to write the HTML code.
